Little Owl. *Catesb. Carol. 1. p. 7. t. 7.*

---

Strix differt a falcone, ut phalæna a papilione; altera enim diurna altera nocturna eſt.  
Noctu pleræque prædantur aviculis, muribus, veſpertilionibus; pedes plerisque  
lanati, ne frigeſcant, digito extimo retrorſum tradili; aures amplæ, membrana  
veſtita, quæ retrotracta tubam Eufſtachianam auris humanæ ſimulat; oculi magni  
noctu lucentes, ut tum acutius videant; die pleræque cæcutiunt, paſſeribus oppro-  
brii expoſita; remigum exteriorum una alterave ſerrata; unguis uncinati, acuti.
